Subject

Door Control TS 970 – New Software 1.2

Description

The door control TS 970 (❶) receives the software 1.2.

This software includes the following changes and enhancements.

Commissioning of the control

- After switching on the mains supply, the control runs in the query mode for about 5 seconds. During this time, the display rotates clockwise.

Emergency stop (terminal X3)

- Applies to frequency converter drive units: Activation of the emergency stop is followed by a security phase, in which the control blocks the drive unit against restarting. This phase lasts for 30 seconds. During this time, the display rotates clockwise.

Expansion of the status log

- In the future, the reaching of the final door positions will also be included in the records of the last 128 events (❷).
- These records can be read and displayed on a smartphone or tablet pc via the GfA-Stick (❸ ⇒ part no.: 20003696) and the GfA+ App (❹). Upon registration in the GfA-Portal (❺), this information is available in unlimited quantities, permanently and for different door controls. Furthermore, by means of a search function in the GfA+ App, a search for available records pertaining to a serial number can also soon be made.

Notes

The new software will be incorporated in series production from March 2016. The described items are documented in the installation instructions.
